

## AQtivate PRO substation monitoring

The AQtivate PRO software offers a true plug-and-play solution for controlling and managing Arcteq's innovative AQ-200 series IEDs. The scalability in AQtivate PRO makes it suitable for a variety of applications. The software can be applied as a cost-efficient, permanent substation HMI or as a protection maintenance and back-up control system. AQtivate PRO supports mobile applications and can be installed on laptop computers for portable substation management solutions. AQtivate PRO reduces life cycle costs for project engineering and commissioning as well as for normal substation use.

The benefits of AQtivate PRO:

- An Ethernet connection to IEDs
- Faster engineering by drag-and-dropping IED configuration and CID files
- A commissioning troubleshooting aid
- Faster fault analysis
- Automatic disturbance recorder downloading
- Event and alarm lists
- Automatic updating of engineering files from substations
- An optional back-up or primary control and status indication
- Measurement trends

You can download the AQtivate PRO flyer [here](#), and the AQtivate PRO instruction booklet [here](#).

## Technical Data

### GENERAL

Total substation management solution  
 Engineering tool for drag and drop of files into IEDs  
 Measurement trend displays  
 Consolidated chronological views of substation events and alarms with time stamp  
 Automatic disturbance recorder download  
 Remote setting and fault register access  
 Accurate protection maintenance data

## Application Drawing
